SWIPE <<<

Google Lighthouse

It is an open-source, automated tool for measuring the quality of web pages. It audits the performance, accessibility, and search engine optimization of web pages.

Gitignore.io

I know that you don't need higher math to create a .gitignore file, but a ready-made tool was created for that. The only thing you provide is information such as the operating system or development environment

gitignore.io

Create useful .gitignore files for your project

Meta Tags

Meta Tags is a simple online tool that you can use to quickly check the meta tags for your website

Frontendchecklist.io

The process of creating a website can often be long, tedious, and very complicated. The Front-End Checklist is here to help. This list includes 88 points to keep in mind when creating a website — quite a lot, right? In addition, each point has a priority marked.

The screenshot shows the 'The Front-End Checklist' application interface. At the top, there's a dark blue header with the 'FRONT-END checklist' logo. Below the header, the title 'The Front-End Checklist' is displayed, followed by a description: 'The Front-End Checklist Application is perfect for modern websites and meticulous developers!'. There are social media links for 'Tweet' and 'Star' (55,710 stars). The main form area has three input fields: 'Project Name', 'Page title or URL', and 'Developer's name or team'. To the right of these fields are several category buttons: HEAD, HTML, WEBFONTS, CSS, JAVASCRIPT, IMAGES, ACCESSIBILITY, PERFORMANCE, and SEO. A progress summary on the right shows: 0/47 ✓ high priority, 0/25 ✓ medium priority, and 0/16 ✓ low priority. A large red square with a white 'F' is also present. A green 'Generate report' button is at the bottom right. A 'Start new checklist' button is at the bottom left. A 'Filter by tags' section is at the very bottom.
